Post-Care Instructions for Liquid Nitrogen Treatment (Freezing / Cryotherapy)

- No special care is needed for the treated areas.
- You may get them wet. They do not need to be covered with a band-aid.
- The areas will turn red or brown and will gradually crust up and peel off **over the next 1-2 weeks**.
- **Blisters may develop.** This is normal. These should **not** be “popped” unless they are bothersome. If this is the case, make a small hole with a clean pin to drain the fluid.
- Lesions on the face may be covered with make-up.
